Neden yavaşlatıcı kullanılmalı?

Daha az gürültü

Yavaşlatma mekanizmalı kayar kapı ve kapaklar, yüksek konsantrasyon gerektiren mekanlarda istenmeyen sesleri önler ve gürültüsüz bir ortam sağlar.

Yüksek güvenlik

Yavaşlatma mekanizması, özellikle küçük çocukların, yaşlı ya da engellilerin olduğu ortamlarda parmakların kapı ve duvar veya kapak ve yan panel arasına sıkışma riskini engeller. Otomatik frenleme sistemi ve yavaş kapanma özelliği kapının veya kapağın çarparak kapanmasını engellediği için yüksek güvenlik sağlar.

Düşük maliyet, yüksek verim

Albatur yavaşlatıcı sistemleri, özellikle farklı tipte kayar kapı ve kapaklar için tasarlanmış ve uygulanmış ürünlerdir. Farklı kapı ve kayar kapı tiplerinin bir çoğu vidalanarak kolayca takılabilen Albatur yavaşlatma sistemleri ile yüksek maliyet gerektirmeden donatılabilir.

Malzeme dostu

Sürgülü kapı ve kapakların sertçe kapanması, mekanizmanın işlemlerini sağlayan makaraların, rayların, kapı ve kapak kanatlarının, profillerin, kasa ve pervazların aşırı yıpranmasına neden olur. Yavaşlatma mekanizması kayar kapı ve kapakların kasaya çarparak yıpranmasını önleyerek uzun yıllar güvenli kullanımlarını sağlar.

Why soft closer should be used?

Less Noise

Sliding doors and covers with soft closer mechanisms prevent unwanted sounds and provide a noiseless environment in places that require high concentration.

High Security

The Soft closer mechanism prevents the risk of fingers being caught between the door and the wall or the door and the side panel, especially in the presence of small children, the elderly or the disabled. The automatic braking system and slow closing feature provide high security as it prevents the door or cover from slamming shut.

Low cost maximum efficiency

Albatur soft closer systems are designed and applied especially different types of sliding doors and covers. Most of the different door and sliding door types can be equipped with Albatur soft closer systems that can be easily screwed and without requiring high cost.

Material friendly

Fast closing of sliding doors and covers causes excessive wear of rollers, rails, door and cover wings, profiles, casing and moldings that enable the mechanism to work. The soft closing mechanism prevents the sliding doors and covers from being worn out by hitting the case, and ensures that they can be used safely for many years.

Pulltens®

Çek-Ger Serisi

Pull & Tension Series

Neden ÇEK-GER kullanılmalı?

Hava şartları, rutubet, taşıma ve istifleme (depolama) nedeniyle mdf, sunta ve ahşap kapak malzemelerde kalıcı burkulma ve atıklık oluşabilmektedir. Ayrıca ahşap üzerine eklenen cam, ayna ve diğer aksesuarlar kapakların düzlemselliğine etken faktörlerdir. Kapaklarımızda bu atıklığı gergi sistemleri ve yan duvarlarda kullanacağımız alüminyum dikme kulplar (dik düzlemde ahşabın düzlemselliğini sağlayabilecek kesit ve atık oluşabilecek eksenlerde ahşabın mukavemetinden daha etkin dirençli alüminyum yada metal ekstrüde profil ve aksesuarlar) ile çözmek mümkündür. Lakin dikme kulplar ile çözüm üretim esnasında etkin olmasına karşın, depolama şartlarına bağlı olarak 1 yada 2 ay sonra açılan ambalajlı ürünlerde yetersiz kaldığı görülmektedir. Bu tip ürün gruplarında çekger mekanizmaları kapaktaki atıklıkları, kullanıldıkları eksen yönünde çözüme kavuşturmaktadır. En ölçüsü 40 cm e kadar olan kapaklarda merkezden bir adet, daha büyük en ölçülerinde iki adet çekger kullanımı önerilmektedir. Cam ve ayna yapıştırılan kapaklarda çekger kullanımında dikkat edilmesi gereken bazı hususlar: Cam, ayna v.s. grubu ahşap panele yapıştırılırken ahşap panel kesinlikle çok hassas ve düz bir zeminde tutulmalıdır. Aksi takdirde yapıştırılma anındaki tüm atıklık, daha sonra çekger gergi yada kulp marifeti ile düzeltilemez bir durum oluşturmaktadır.

Why Pull-Tension ?

On the wooden door in materials, MDF materials and chipboard materials can be permanent strain and swelling. Because of bad weather condition, humidity, transport and storage factors. Also other factors effecting the flatness of the wooden covers; installing glass, mirror and other accessories on the wooden panel. Its possible to solve this swelling problem for using Pull & Tension Equipments and using the pillar aluminium handles on the side walls of the wooden panel. However its effective solution using the pillar aluminium handles during the production but it seems to be inadequate solution if the products keep in storage 1 or 2 months. In this type of products group, Pull & Tension mechanism resolve this swelling problem on the cover using the their axis direction side. Width measure to 40 cm covers, from the center of the cover 1 pcs Pull & Tension should be using, more larger width measure 2 pcs Pull & Tension recommended. Issues to be considered Pull & Tension when used glass and mirros on the cover: When use glass and mirros on the wooden cover panel; panel definitely should be keep on the very sensitive and flat ground. Otherwise during the installing glass or mirros, at this moment swelling that may occur unimprovable situation.

Cam, ayna v.s. grubu ahşap panele yapıştırılırken, panel kesinlikle çok hassas ve düz bir zeminde tutulmalıdır. Aksi takdirde yapıştırılma anındaki tüm atıklık, daha sonra çekger gergi yada kulp marifeti ile düzeltilemez bir durum oluşturmaktadır.

While the installation glass, mirror etc.. on the panel, the panel must be kept on a very sensitive and flat surface. If not, all the bending while the stick on the panel; later on, it cannot be corrected with the tension or handle
